

NICK KALAITZIDIS

Founder & Founding Software Engineer

Startup-oriented software engineer and founder building Kelevo, a SaaS platform for trucking operations. Experienced in ambiguous early-stage environments, owning product direction, architecture, implementation, deployment and launch readiness as a solo engineer.

FOUNDER-LEVEL IMPACT

Founder-led product

Built a multi-tenant SaaS solo — web, Pro & mobile clients, zero to launch.

Domain insight

Used real trucking experience to define the product.

High ownership

40+ data models, 50+ REST endpoints, 350+ tests and full deploy — one engineer.

Execution under ambiguity

Shipped OCR import, Stripe billing and owner-operator settlements end to end.

PROFESSIONAL EXPERIENCE

Founder & Founding Software Engineer

2024 - Present

Kelevo - Transportation Management SaaS

- Founded Kelevo to modernize dispatching and fleet management for small trucking companies.
- Led product discovery, roadmap planning, architecture, implementation and launch preparation as the sole founder-engineer.
- Built the complete platform solo — 40+ PostgreSQL models, 50+ REST endpoints, web/Pro/mobile clients and a Dockerized AWS/Cloudflare deployment.
- Translated operational trucking pain points into structured workflows for dispatching, fleet assets, document-heavy processes and operational control.
- Balanced engineering trade-offs, product scope and delivery speed while preparing the platform for first commercial users.

Truck Dispatcher

2024 - 2025

Iron Wing Dispatching

- Coordinated with brokers, drivers and logistics teams across dispatch workflows.
- Converted operational trucking knowledge into software requirements for Kelevo.

Owner & Manager

2011 - 2022

Nick Kalas Winery

- Managed business operations, production planning, equipment, seasonal workers and customer relationships.

STARTUP PRODUCT HIGHLIGHT

Kelevo Transportation Management System

Founder-led SaaS product designed for small and mid-sized trucking operations that need a unified system for dispatching, fleet management, document processing and workflow automation.

- Built for customer problems observed first-hand in dispatching and commercial trucking.
- Designed for a lean launch path, operational clarity and future product expansion.

STARTUP FIT

- Founding engineer
- Zero-to-one product building
- High ownership
- Ambiguous problem solving
- SaaS execution
- Customer/domain empathy
- Lean delivery
