

NICK KALAITZIDIS

AI-Native Full-Stack Software Engineer

Full-stack software engineer and founder using AI-assisted engineering workflows to build SaaS software faster while maintaining code quality through testing, reviews and CI/CD. Founder of Kelevo, a Transportation Management System for trucking operations.

AI-NATIVE ENGINEERING IMPACT

AI-assisted delivery

Uses LLM tools to accelerate design, implementation and review.

Quality guardrails

Pairs AI workflows with testing, CI and structured review.

Full-stack SaaS

Built a commercial product across backend, frontend and cloud.

Domain software

Applied trucking experience to real operational workflows.

PROFESSIONAL EXPERIENCE

Founder & AI-Native Full-Stack Engineer Kelevo - Transportation Management SaaS

2024 - Present

- Founded and engineered a SaaS platform for trucking companies while applying AI-assisted software engineering to accelerate delivery.
- Used GPT-5, Claude Code and Codex-style workflows for design exploration, implementation planning, code review, debugging and testing support.
- Maintained engineering guardrails through TypeScript, structured tests, CI/CD, code reviews and staged delivery practices.
- Built platform capabilities covering authentication, dispatching, fleet management, document workflows and operational reporting.
- Designed the platform with a path toward future AI-assisted logistics workflows while keeping the core product useful without AI dependency.

Truck Dispatcher Iron Wing Dispatching

2024 - 2025

- Coordinated with brokers, drivers and logistics teams across dispatch workflows.
- Converted operational trucking knowledge into software requirements for Kelevo.

Owner & Manager Nick Kalas Winery

2011 - 2022

- Managed business operations, production planning, equipment, seasonal workers and customer relationships.

AI & PRODUCT HIGHLIGHT

Kelevo Transportation Management System

A trucking operations SaaS platform built through modern AI-assisted development practices, combining domain expertise, full-stack engineering and quality controls.

- Used AI coding tools as engineering accelerators rather than substitutes for architecture, testing and product ownership.
- Designed around practical logistics workflows with future room for AI-assisted dispatch and operations features.

AI ENGINEERING PRACTICES

- AI-assisted engineering
- Multi-agent workflows
- LLM-assisted code review
- Prompt-driven design exploration
- Testing and CI guardrails
- Human-led architecture
- Developer productivity

TECHNICAL SKILLS

LANGUAGES

TypeScript

JavaScript

Python

AI WORKFLOW

GPT-5

Claude Code

Codex

Multi-Agent Workflows

AI Code Review

FRONTEND

React

HTML5

Tailwind CSS

BACKEND

Node.js

Express

REST APIs

PostgreSQL

Prisma

QUALITY & CLOUD

Testing

CI/CD

Docker

Linux

Cloudflare

GitHub Actions

CORE STRENGTHS

AI-assisted development
Multi-agent workflows
Full-stack delivery
Testing and CI guardrails
Product ownership
Logistics software

EDUCATION

The Odin Project
Full-Stack JavaScript Curriculum
